Artificial Cricket Wickets

C J Sports specialize in the supply and expert fitting of artificial wickets.

Our Artificial Cricket Wicket has been refined over the last 25 years to provide playing characteristics as close as possible to a traditionally prepared strip without the constant maintenance.

The wilton weave carpet and dense fibre shockpad are made in Britain from the finest materials and comply with ECB requirements. The dynamic base is constructed using the best available hard porous aggregate and does not suffer from excessive bounce like those systems using road stone sub base.

A 30 metre Wilton weave carpet match wicket installed on a School Playing field or Cricket Club ground should give 15 years of service with minimal maintenance. Once installed, the match wicket can be used in almost all weather conditions reducing the pressure on grass strips. Even when the carpet finally needs to be replaced, the dense fibre shockpad and dynamic base will still give many years of service.
